

# The Beauty of a VelaShape Treatment

80% of all women over the age of 20 have cellulite, regardless of size or shape. The appearance of cellulite can be especially stubborn to treat after pregnancy, regardless of exercise and proper eating habits.

VelaShape is the only FDA cleared treatment that safely delivers heat into the fatty tissue to reduce cellulite and reshape the body.

### How does VelaShape work?

VelaShape uses combined energies known as elōs™ to precisely target and heat fatty tissues within the treatment area. In addition, the vacuum and tissue manipulation evens out the skin to reveal a smoother, tighter figure.

### How quickly will I notice a change?

Gradual improvement of the treated area can be seen following the first treatment – with the skin surface of the treated area feeling smoother, firmer and tighter. Results in circumference and cellulite reduction will be most apparent 6 - 8 weeks following the final treatment session.

### What areas can I treat?

All areas of the body, but the areas most women like to treat post-pregnancy are the abdomen, thighs buttocks.

### What can I expect?

Results based on studies focused on post-pregnant women shows an average treatment circumferential reduction of 2.9 inches on the abdomen and 2.3 inches on the buttocks.

### Does treatment hurt?

Most patients find VelaShape comfortable – like a warm deep tissue massage. The treatment is designed to accommodate your sensitivity and comfort level. It is normal to experience a warm sensation for a few hours post treatment. Your skin may also appear red for several hours.

### Is it safe?

Treatment is safe and effective for all skin types and colors. There are no reported short-or long-term health effects.

### How quickly can I start treatments?

Post childbirth. Your physician will be able to advise you on the right time to start treatment.
